

Drones

A drone or a UAV (unmanned aerial vehicle) is a pilotless aircraft that operates through the utilization of a combination of technologies. While the typical drones are aerial vehicles, drones can also be ground or sea vehicles that operate autonomously. This transformative technology is reshaping the job market and how companies operate. Drones are being deployed to carry out various missions in almost every industry sector including fields like construction, utilities, public safety, border protection, agriculture, and transportation & logistics.
